

Vensa – Primary care reimaged

Vensa's mission is connecting the world with access to healthcare services to better well-being. We are focusing on improving access to primary care services for all Kiwis. So far in 2019 alone, we have helped 1.3 million New Zealanders receive care through our health reminders.

Later this year, we will be announcing the full launch of our Vensa.com patient portal. This will include the ability for patients to access their lab results, biometric identity verification, personal health record and clinical notes, as well as integration of our Online Prescription service (vScript) into the New Zealand ePrescribing Service.

Through our partnership with Precision Driven Health, we have a multimillion-dollar project underway that aims to answer the question around how we can accurately automate interpretation and dissemination of lab results to save clinician time while keeping the clinical control in their hands in a way that is intuitive and flexible.

Every dollar you spend with Vensa helps us re-invest it right back into research and development. By being a Vensa customer, you are helping invest into making primary care affordable and accessible.

This is only the beginning.

Join us at PMAANZ 2019 to get a sneak peek into the future.
