

Digital Hygiene

keeping your health data; your patients; and yourself digitally safe and secure

Our primary care community's ever-growing appetite for digital migration and innovation is rapidly outstripping its corporate, clinical and ICT operational work-forces' ability to develop and maintain a private and secure digital health ecosystems.

Despite wanting 'to do the right thing', the current reality is that many primary care providers and GP practices are presently undertaking insecure digital practices, and maintaining potentially vulnerable ICT systems, in the course of providing services to their consumers.

Evidence derived from the cyber security industry strongly suggests a 'literate' work-force substantially reduces the instances and severity of cyber security breaches. This session will build your awareness of this growing issue, and give you the basic knowledge building blocks to help ensure your practice and patients remain digitally secure and private.
